Press Release

swarmOS© broadens its market appeal with on-premise editions for Jira

Flexibility of deployment options and demonstrable customer value are the keys to building further momentum

Mülheim a.d.R., February 22th 2018 – The recently-launched startup swarmOS©, a company with a mission to support the process of agile business transformation, announced today that customers can now choose between cloud-based or on-premise deployments of its products[1].

As well as getting the proven benefits of simplified business transformation using Agile techniques, by deploying the swarmOS products in its own data centre, a customer can thus get the further advantages of complete IT environment control, close integration with other on-premise software and maximal leverage of its own IT assets.

This is one of the extra capabilities hinted at by Pascale Queva, CTO & co-founder of swarmOS, when the company recently underlined its successful launch with the news that it had secured nearly half a million dollars in second-round funding.

Customer success: Accelerating the business transformation journey

swarmOS customer Lowell adopted the swarmOS portfolio as a key step towards achieving their vision of becoming the leading and most trusted receivables management company. "Being fast and flexible to adapt to market conditions and organizational change made us more competitive," said Thomas Dold, CEO of Lowell DACH. "Being able to leverage all of the talent throughout the organization at the same time provides tremendous value that allows us to achieve our strategic goals faster. Getting advice and the toolset from swarmOS has accelerated our journey into agile project management and made it easy for us to manage our project portfolio and increase transparency. The proven best practices and using a toolset made for business users is a key part of our agile strategy."

---

[1] The current portfolio consists of three products: **swarmOS Foundation** to enable users to setup strategy and projects easily; **swarmOS Cockpit** to provide users meaningful insight and overview on the state of health of their projects; and **swarmOS Analyzer** to display projects in an innovative graphical fashion so that users can spot dependencies, risks and issues easily.

swarmOS Cockpit and swamOS Analyzer are available as on-premise versions; swarmOS Cockpit comes with swarmOS Foundation built-in. Prices vary from $1 to 1.9 per user per month and can go down to as low as $0.10 per user month for larger number of users (10,000+)

For Publishing on February 22th, 2018, 5am

"It's important that we can offer a range of deployment options," said Dieter Weißhaar, CEO of swarmOS. "There are many organizations out there, large and small, who have specific needs in such areas as data privacy or who wish to get the best out of their current IT real estate. Just as Atlassian makes a server version of its platform available, so we offer customers who have gone this route the opportunity to get the proven business benefits from our portfolio with the minimum extra upheaval and expense."

About swarmOS©
